1. Insert the Vehicle Data Connector on the MaxiVCI V200 into the vehicle's DLC, which is generally located under the vehicle dashboard.

2. Ensure the tablet is sufficiently charged or is connected to the supplied DC power supply. Power up the tablet.

3. Pair the tablet with the MaxiVCI V200 via Bluetooth to establish a communication link.

   NOTE: The tablet and the MaxiVCI V200 are configured to automatically synchronize with each other on first use, so there should be no need to pair up.

   Alternatively, connect the tablet and the MaxiVCI V200 using the USB cable.

4. When the MaxiVCI V200 is properly connected to the vehicle and the tablet, the VCI status button on the bottom bar of the screen will display a green badge with a check mark at the corner indicating the tablet is ready to start vehicle diagnosis.

5. Hold the MaxiSys MS906 Pro-TS tablet with its top right corner close to the tire sidewall at the valve stem to activate the TPMS sensor.
